Methodology, tools and perspectives to achieve neural networks fast deployment on STM32: Image classifier case study using Nucleo IoT node

Danilo Pau
Technical Director, IEEE & ST Fellow
System Research and Applications

Dec 9th, 2021

Key steps for Supervised Deep Learning

Neural Network (NN) Model Creation

Operating Mode

Conceive &
Train NN Model

Deploy application
on the field

1

Clean, label data
Build NN topology

3

Convert NN into
optimized code for MCU

5

Capture data

Clean, label data
Build NN topology

CIFAR-10 dataset

- **CIFAR-10** is a labeled subset of a 80 million tiny images dataset
- **60,000 8-bit color images**
 - **50,000 training** images
 - **10,000 test** images
- **32x32** pixel images
- **10 classes** each with 6,000 images

STM32L4 Discovery kit IoT node

- Arm® Cortex®-M4 core with 1 Mbyte of Flash memory and 128 Kbytes
- 64-Mbit Quad-SPI Flash memory
- Bluetooth® V4.1 module
- Sub-GHz (868 MHz or 915 MHz) low-power-programmable RF module
- 802.11 b/g/n compliant Wi-Fi® module
- Dynamic NFC tag based on M24SR with its printed NFC antenna
- 2 digital omnidirectional microphones
- Capacitive digital sensor for relative humidity and temperature
- High-performance 3-axis magnetometer
- 3D accelerometer and 3D gyroscope
- 260-1260 hPa absolute digital output barometer
- Time-of-Flight and gesture-detection sensor
